

## **Interview of Lyke Twyman (UK)**

**Participant in the Pirate Box workshop led by Benjamin Cadon @ Access Space Network, Sheffield (NO), 4.4.2014**

### **> What attracted you in this workshop and what were your expectations?**

One week ago I read a post on Access Space facebook saying «FM transmitter, Raspberry-Pi». It was mostly the router hacking and FM transmission that draw my attention. I have been looking for a while for such skills, because of specific needs of mine.

### **> Can you describe what things you learned in this workshop? What did you learn that was unexpected?**

I learned how to make an FM transmitter, and that is fantastic, but I did not expect the amount of code knowledge required to program it. I also discovered how to use the terminal of my computer, and then accessed the core operating system...

### **> What are you going to do with this knowledge now?**

I am going to go home and play more with the transmitter. This is the kind of technology that I will use in my sound installations, together with my partner.

### **> Would you like to develop these skills/knowledge further or was what you learned sufficient for your own objectives?**

I would like to go deeper into this things.

### **> Will you collaborate in future with the people you met in the workshop?**

Definitely, I already exchanged contact with my workshop neighbour.
